

UTAH

NINDS StrokeNet

Recruitment by TriNetX

Cathy Revere

Cathy.Revere@hsc.utah.edu

TriNetX Global Network

Healthcare organizations and life science companies that aggregate and harmonize clinical data pulled from EMR.

- 120+ healthcare organizations
- 250 million patient records
- 40 billion clinical observations

TriNetX Data

TriNetX can pull data from the electronic medical records of one Health Care Organization (HCO) or many.

- Diagnosis codes
- Demographic Data
- Visit dates
- Medications
- Lab and genetic testing
- Procedures

TriNetX Utility

1. Protocol Development - assess feasibility of entry criteria early in protocol development using de-identified data from HCOs.
2. Feasibility - Sites can use de-identified data to accurately assess their HCO patients to determine site level feasibility.
3. Recruitment - Sites can find patients who meet entry criteria. Then single HCO patients can be re-identified to create a recruitment list. IRB approval is required to re-identify records.

TriNetX Access

1. Each institution has their own process for providing staff and faculty access TriNetX.
2. With institutional approval you can login with a username, password, and two-factor authentication.
3. After logging in, go to “Studies” and select “Create New” in the right upper corner.
4. Set includes a title, summary, phase, and NCT# (if available)

MUST HAVE 

Ungrouped Terms

MUST HAVE

ICD-10-CM	I61	Nontraumatic intracerebral hemorrhage	11,830
AND			
ICD-10-CM	I48	Atrial fibrillation and flutter	54,750

Inclusion Criteria

Search terms can be entered as a diagnosis, lab value, or clinical finding. Typically, the more inclusive code is higher in the search.

Inclusion Criteria - typically entered in the MUST HAVE column

Each criteria is followed by **AND/OR**. IE: ASPIRE requires Afib and ICH.

CANNOT HAVE 

CANNOT HAVE

ICD-10-CM	I33	Acute and subacute endocarditis	3,080
OR			
ICD-10-CM	I82.40	Acute embolism and thrombosis of unspecified deep veins of lower extremity	62,900
OR			
ICD-10-CM	I26	Pulmonary embolism	37,440
OR			
ICD-10-CM	D66	Hereditary factor VIII deficiency	1,290
OR			

Exclusion Criteria

Exclusion criteria are best placed in the CANNOT HAVE column.

Most Exclusion criteria are separated by the **OR** since any one criteria is exclusionary.

The screenshot shows a patient search interface. At the top, there are two columns: 'Patients' with a value of 810 and 'HCOs' with a value of 1. A blue button labeled 'Count Patients' with a refresh icon is circled in red. Below this, there is a search bar with the text 'CANNOT HAVE' and a search icon. The search bar contains the text 'Search Term...'. Below the search bar, there is a table with two rows. The first row is for 'Acute and subacute endocarditis' with a patient count of 3,080. The second row is for 'Acute embolism and thrombosis of unspecified deep veins of lower extremity' with a patient count of 62,900. The patient counts in the table are circled in red. The interface also shows a filter for '≥ 18 years, Any sex' and a total of '1,409,994 patients on network'.

ICD-10-CM	Code	Description	Patient Count
I33		Acute and subacute endocarditis	3,080
I82.40		Acute embolism and thrombosis of unspecified deep veins of lower extremity	62,900

Patient Counts

Click “Count Patients” to see how a new term changes your search.

The number of patients is rounded, so an uncommon condition may not change your patient count.

Each search term shows how many patients in the HCO have the term searched.

Reports and Dataset

Each time you add or remove a search term, you can create a dataset report by clicking “Count Patients”

Name the report by clicking the pencil icon in the upper left corner and typing the report name.

Click Count Patients and the report will populate on the far right.

Analyze Cohort and Request Recruitment list

After you select the Dataset, your institution will review and send the data set.

On the left side of the screen are tools to analyze the cohort further.

To obtain a list for recruitment, submit a copy of the Dataset Report to your data science team along with you IRB #. Our list had MRN, gender, address, and distance from our site.

Under the Study menu go to Study Management then Team to add other users within your institution.
